FREE FACULTY WORKSHOPS

On manufacturing practices and technologies

A major educational event is happening in Hartford this May, and you are encouraged to attend. More than 3,000 students, faculty and industry leaders will converge on the Connecticut Convention Center to see demonstrations of manufacturing processes, learn what Connecticut manufacturers do, and attend an economic conference on the state of manufacturing.

As part of this conference, free faculty workshops will be offered on Thursday, May 18. CEU credit and lunch is included.

Four Workshops to choose from:

1. Green Technologies: Making a Difference — Dependence on foreign oil and environmental concerns have raised the urgency to develop technologies that offer environmentally sound, accessible energy. Producing more alternative energy sources such as fuel cell energy and solar energy are becoming top priorities among U.S. manufacturers. Hear from corporate executives on how they are promoting clean, alternative sources of energy. Also find out from a community college teacher how he is preparing his students to meet the challenge of working in "green" companies.

Manufacture YOUR FUTURE CAREERS EXPO

Faculty Workshops

Thursday, May 18, 2006
9 a.m. - 1 p.m. *(includes lunch)*
**Connecticut Convention Center
Hartford**
(0.5 CEU credits)

2. Lean Manufacturing: Shaping the Next Generation of Manufacturing — What does it mean to be "lean" and how have lean manufacturing practices changed the way manufacturers are doing business? More than ever, American manufacturers need to be competitive in the global marketplace. One way they are winning the race is by working more efficiently. This new efficiency requires different skills and mindsets from workers if they are to succeed. Find out how you can help your students prepare for this new environment. Hear from manufacturers who

have made the successful transition to lean manufacturing and what it means for their employees. A lean manufacturing trainer and faculty member will also share their experiences in teaching lean manufacturing practices.

3 Recruiting and Retaining Under-represented Groups in Manufacturing — Minorities and women represent a fraction of workers in manufacturing today. What will it take to encourage these students to see how they can succeed and what opportunities are available to them in the world of manufacturing? Hear from representatives from the Connecticut Women's and Education Legal Fund (CWEALF), the Connecticut Pre-engineering Program (CPEP) corporate executives and college administrators on how you can inspire these students.

4 Teambuilding Leadership Workshop — Are you an educator in need of building stronger relationships with industry representatives, colleagues and other schools to create greater opportunities for new curriculum around manufacturing practices? Then this workshop is for you. Hear from an expert in teambuilding and learn how in this two-hour hands-on training workshop.

PLUS! GENERAL SESSION

A major funder and supporter of this career expo is the Connecticut Community College's College of Technology Regional Center for Next Generation Manufacturing, which promotes and develops resources for educators and students interested in "new" manufacturing.

Presentations include:

- The College of Technology's 2+2+2 program
- A faculty externship program
- The new manufacturing marketing campaign which includes a brand new DVD designed to encourage students to enter manufacturing careers.

Register now for the workshops you would like to attend.

Thursday, May 18 at the Connecticut Convention Center in Hartford
